The 2020 Point in Time homeless count occurred in the Comox Valley on the evening of March 10 and the day of March 11 to help provide an overall snapshot of homelessness in the community.

People were identified as experiencing homelessness compared to 117 in 2018.

132

Where did individuals stay the night of the count?

44% Sheltered
56% Unsheltered

30% Outside
27% Couch surfing
24% Makeshift shelter/tent

Of Unsheltered Respondents*

40% Experienced homelessness for the first time as a youth
30% Had been in foster care, a youth group home, or under a youth agreement

AGE BREAKDOWN

14% Youth Under 25
69% Adult 25-54
17% Senior 55+

GENDER

59% Man
35% Woman
6% Another Gender Identity

SEXUAL ORIENTATION

13% of respondents identified as 2SLGBTQIA+

TRANS EXPERIENCE

5% of respondents identified as having trans experience

INDIGENOUS IDENTITY

20% of respondents identified as Indigenous

Compared to 6% of the general population (2016 Census)

HEALTH CONCERNS

49% Medical Condition
48% Physical Disability
50% Mental Health Issue
57% Addiction
32% Learning Disability

33% Reported an acquired brain injury
68% Reported two or more health concerns

LENGTH OF TIME HOMELESS

33% Under 6 months
53% 1 year or more

78% of respondents had been in the community for at least 1 year
55% of respondents had been in the community 10 years or more

REASONS FOR HOUSING LOSS*

34% Not enough income
24% Substance use issue
20% Mental health issue

INCOME

96% indicated one or more sources of income

Sources of Income*

45% Income assistance
37% Disability benefit
24% Bottle collection
13% Panhandling

SERVICES ACCESSED*

75% Food services
55% Emergency room
52% Housing services

* Top responses highlighted

Not listed includes respondents who selected ‘Not listed’ and may have provided a write-in answer, e.g. nationality, ethnicity or religious group.
Limitations and Methodological Considerations

Please note the following considerations in reviewing this data.

In the spring of 2020, the Province of British Columbia provided funding to conduct homeless counts in 16 B.C. communities. Due to the COVID-19 pandemic, only 8 of the 16 communities were able to conduct their counts. They completed their counts before March 17, 2020, when British Columbia’s Provincial Health Officer declared a public health emergency under British Columbia’s Public Health Act.

The Homelessness Services Association of BC, with support from BC Non-Profit Housing Association and Urban Matters coordinated these counts and prepared this report.

Data from counts in the count communities constitutes a benchmark to measure progress made to reduce homelessness over time.

› Point-in-Time (PiT) homeless counts provide a snapshot of people who are experiencing homelessness in a 24 hour period, their demographic characteristics, service use and other information.

› For the purpose of counts conducted in the provincially funded B.C. communities, an individual was defined as experiencing homelessness if they did not have a place of their own where they paid rent and could expect to stay for at least 30 days. This included people who:
  › Stayed overnight on the night of the count in homeless shelters, including transition houses for women fleeing violence and youth safe houses, people with no fixed address (NFA) staying temporarily in hospitals, jails or detox facilities (defined as “sheltered”); and,
  › Stayed outside in alleys, doorways, parkades, parks and vehicles or were staying temporarily at someone else’s place (couch surfing) and/or using homelessness services (defined as “unsheltered”).

› During the count, we conduct surveys with people who identify as experiencing homelessness. In areas where surveys are not possible, and to support the PiT count, we collect additional information from shelter operators, hospitals, jails and BC Housing.

› PiT counts are an undercount and represent only those individuals identified during a 24-hour period.
  › This is because not everyone experiencing homelessness can be found and not everyone who is found consents to be surveyed.
  › While PiT Counts are an accepted methodological tool, the numbers are understood to be the minimum number of people who are experiencing homeless on a given day in that community.
  › Please note the percentages are based on the number of people who responded to survey questions and not the total number of people identified as experiencing homelessness.
